

Griffith's Gnat

By Jerry Bernier

Hook: **Size 16 to 20 dry fly**

Thread: **Black**

Body: **Peacock herl**

Hackle: **Grizzly, palmered**

Head: **Black thread**

Fish dry or in surface film to imitate a cluster of midges. Can also be tied with different colored thread (red, orange, white, etc.) This is a good fly for fishing spring creeks or tail-waters in the winter, as well as ponds in the fall or any time midges are hatching.
