

Maxima Emerger by Gerry Crow

Hook: Tiemco 2457 Caddis larva (or equivalent) size 12 or 14
Thread: Olive
Hackle: Dun
Tail: Dun antron
Wing post: Dun antron
Thorax: Reddish brown beaver dubbing
Abdomen: Maxima Chameleon 1X tippet

The Maxima emerger is a good fly to imitate the dark Hendrickson or red quill. The Maxima tippet material imitates the color and segmentation of the natural. It will also tend to keep the body of the fly low in the surface film.

A variation is tied with a wing made of snowshoe rabbit fur.
